TASK: **Pairwise Cycling Safety Comparison**

	Variant	Draw instruction	Few-shot examples
(a)	Few-shot, no draw instruction	—	✓
(b)	Few-shot with draw instruction *(adopted)*	✓	✓
(c)	Zero-shot with draw instruction	✓	—

(a) No draw instruction, few-shot

You will see two images: Image A (left) and Image B (right). Which image looks safer for bicycle users? Choose 1 if Image A looks safer, 2 if Image B looks safer, or 0 if both look equally safe.

Respond with ONE line only:

`[VOTE]: [Vote Number] - [reason]`

Examples:

`[VOTE]: 1` - Image A has a physically separated cycle track and lower motor traffic volume, reducing conflict risk.
`[VOTE]: 2` - Image B has a wider road with lower motor traffic speed and no close vehicle passing.
`[VOTE]: 0` - Both streets are quiet residential roads with similar traffic volume and no dedicated cycling provision.

Now decide.

(b) Draw instruction, few-shot (final prompt used in the main study)

You will see two images: Image A (left) and Image B (right). Which image looks safer for bicycle users? Choose 1 if Image A looks safer, 2 if Image B looks safer, or 0 if both look equally safe - many pairs look similarly safe and if there is no clear meaningful difference, choose 0.

Respond with ONE line only:

`[VOTE]: [Vote Number] - [reason]`

Examples:

`[VOTE]: 1` - Image A has a physically separated cycle track and lower motor traffic volume, reducing conflict risk.
`[VOTE]: 2` - Image B has a wider road with lower motor traffic speed and no close vehicle passing.
`[VOTE]: 0` - Both streets are quiet residential roads with similar traffic volume and no dedicated cycling provision.

(c) Draw instruction, zero-shot

You will see two images: Image A (left) and Image B (right). Which image looks safer for bicycle users? Choose 1 if Image A looks safer, 2 if Image B looks safer, or 0 if both look equally safe - many pairs look similarly safe and if there is no clear meaningful difference, choose 0.

Respond with ONE line only:

`[VOTE]: [Vote Number] - [reason]`

Now decide.
